

Assignment 8

End to End IoT System

Fall 2024 - Group 27

Leslie Ortega & Jessica Alejandro

Table of contents

01

**System
Functionality**

02

Metadata

03

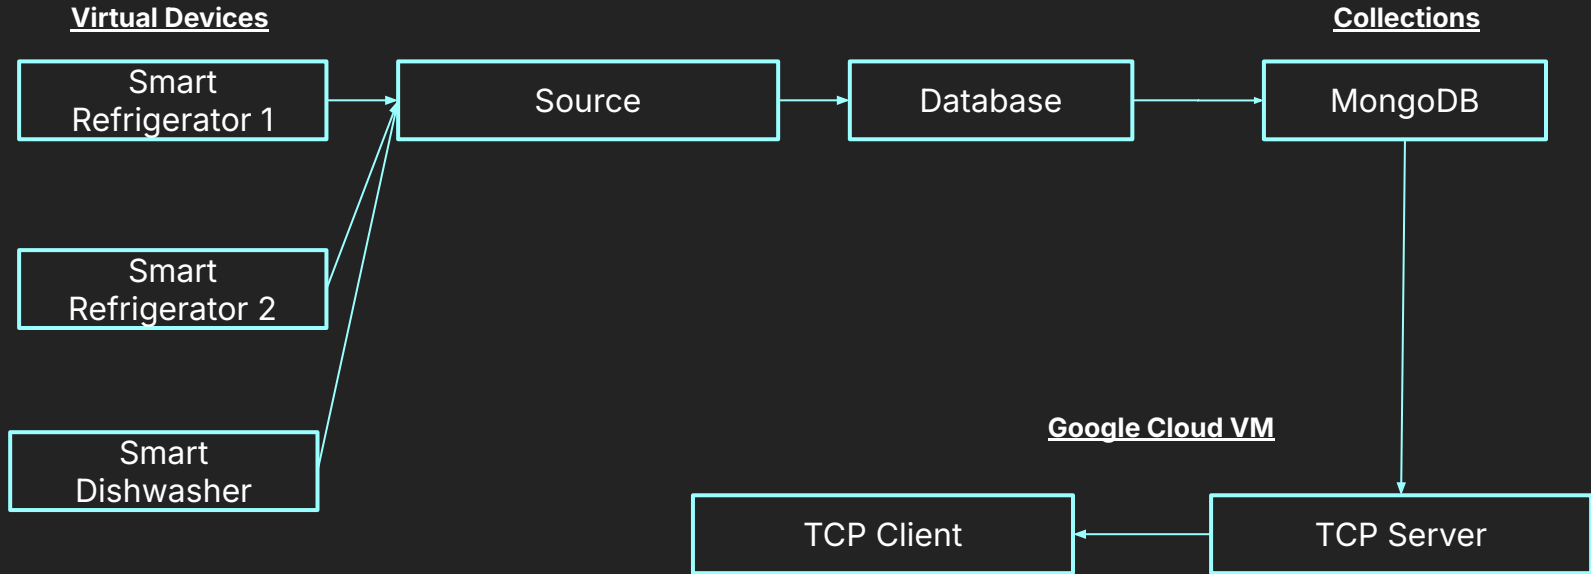

Challenges

04

**Dataniz
Feedback**

System Architecture

Metadata - Queries

1

What is the average moisture inside my kitchen fridge in the past three hours?

2

What is the average water consumption per cycle in my smart dishwasher?

3

Which device consumed more electricity among my three IoT devices (two refrigerators and a dishwasher)?

> Used **datetime** and **payload's topic** name to identify the **board** and corresponding **sensors**

Challenges

PyMongo Connection -
Verifying DB access w/o
insertion

**Delayed Tables in
MongoDB -**
Table Appears when it was already
deleted in Dataniz

**Troubleshooting the best
metadata to use as an
identifier for collections**

**Payload Data could not be
moved from subcategory**

DataNiz Feedback

1. Outdated Updates

Changes: Editing of Dataniz features may not reflect on MongoDB immediately

Effect: Adding a table by modifying the data link on DataNiz results in a table that does not disappear from MongoDB

Data Links									
<div>CREATE DELETE</div>									
<div>EXPORT</div>									
<input type="checkbox"/>	ID ↓	Name	Topic	Source Name	Destination Name	Active	Created At	Updated At	Actions
<input type="checkbox"/>	1663	Device 1	Device 1 Connection	Source 1	Destination 1	<input checked="" type="checkbox"/>	11/13/2024, 5:11:08 PM	11/13/2024, 5:11:08 PM	
1-1 of 1 < >									

➤ In the images above, the Smart Refrigerator was deleted in Dataniz but is still on MongoDB

2. No Location Feature

Metadata:

Must be entered manually, no location detection services

Effect:

Must use pyMongo to get datetime or add library for timezone

Thanks!
